

Doctoral Supervisory Committee

A doctoral supervisory committee typically consists of five members of the graduate faculty, including your advisor, designated as chair, and including an external member, who is not allowed to have a joint appointment in mathematics. At least three members, including the chair must have appointments in the Department of Mathematics. For each declared minor, the committee must have a representative in that discipline which may also serve as the external member or co-chair.

The Mathematics Department requires that a supervisory committee be appointed no later than the Spring term of the second year of graduate study.

You may form a committee with only four members, but the oral qualifying exam and the thesis defense must be attended by five appropriate graduate faculty members, including all committee members. If you add or change committee members later, as the direction of your research is more well- defined, a change of committee form is required, which should be filed before the term in which you graduate.

Please consult with your advisor, mentor, or graduate coordinator about the composition of your committee. Print the names of your committee members on the lines below and ask them to indicate their willingness to serve by signing next to their name. Turn this form into the graduate secretary to inform her of the proposed composition of your committee, so that she can arrange to have the supervisory committee officially nominated by the department, approved by the dean of the college and appointed by graduate school.
