Inspiration
An aquarium is a complex, regulated built environment, in which the needs of a variety of organisms are met to produce a successful and thriving ecosystem. In many ways a university parallels the foundation of an aquarium, in which variables are controlled to promote productivity. The objective of this concept is to create multi-purpose spaces, which act to effortlessly appeal, engage, and create interest within a learning environment.
What is a flipped class?

“The term is widely used to describe almost any class structure that provides prerecorded lectures followed by in-class exercises.”

How is a flipped classroom structured?

“Instructors might lead in-class discussions or turn the classroom into a studio where students create, collaborate, and put into practice what they learned from the lectures they view outside class.”

What characteristics do successful active learning environments share?

“Round tables, open room with scaled elements, small group layout, availability and access to technology, comfort and convenience, student display screens, and markerboards.”

Why are coworking spaces successful?

“The resources, community, and the ability to be flexible and quick.”
